JobPilot AI

v1.0 • OPEN SOURCE

The Personal AI Job Application Agent That Discovers, Matches & Drafts Applications For You

Author: Rahul Girase

What is JobPilot AI? An autonomous, production-grade agentic AI assistant. It continuously scans 10+ career sources (Greenhouse, Lever, Arbeitnow, LinkedIn, Naukri), extracts requirements, matches jobs against **your** skills and graduation year, and prepares tailored cover letters with a strict **Human-in-the-Loop** review model. No application is ever submitted without your explicit 1-click verification.

System Prerequisites

- **Python 3.11, 3.12, 3.13, or 3.14:** Download free from python.org. (*Crucial: check 'Add Python to PATH' during installation*).
- **Git:** Download from git-scm.com (or download ZIP from GitHub).

Step 1: Clone or Download the Project

Open your Terminal or PowerShell and run:

```
git clone https://github.com/mathicianrahul/AI-Agent-that-Apply-Job-Automatically-.git
cd AI-Agent-that-Apply-Job-Automatically-
```

Step 2: Start with One-Click (Recommended)

We built zero-hassle launchers that set up the virtual environment, install requirements, and run the dashboard automatically:

Windows:	Double-click **run.bat** in the project folder (or type .\run.bat in PowerShell).
Mac / Linux:	Open Terminal and run chmod +x run.sh && ./run.sh.

What happens automatically: The launcher detects Python, creates a dedicated virtual environment (venv), installs dependencies from requirements.txt, sets up .env, and starts the web dashboard at **http://localhost:8501**.

Manual Command-Line Alternative:

```
python -m venv venv && .\venv\Scripts\activate # (Mac/Linux: source venv/bin/activate)
pip install -r requirements.txt
python -m streamlit run app.py
```

Step 3: Personalize Your Profile in the Dashboard

Open **http://localhost:8501** in your browser and complete these 2 quick steps:

1. Resume Manager	Navigate to **Resume Manager** → Upload your resume (PDF or DOCX). The parser automatically extracts all technical skills, projects, and education into your profile.
2. Candidate Profile	Navigate to **Candidate Profile** tab. Fill in your **Full Name**, **Email**, **Graduation Year** (e.g. 2025, 2026, 2027), **Preferred Locations** (e.g. *Bangalore, Pune, Mumbai, Remote*), and **Target Roles** (e.g. *AI/ML Engineer, Data Scientist, Python Developer*). Click **'Save Profile Settings'**.

Step 4: AI LLM Token & Live Job Search (Optional)

JobPilot works completely offline with high-accuracy rule-based fallbacks. To activate live AI cover letter drafting and daily email digests, configure your .env file:

```
# Free Hugging Face Token for LLM Cover Letter Drafting:
HF_TOKEN=hf_your_free_token_here
HF_MODEL=meta-llama/Llama-3.2-3B-Instruct

# Your Email for Daily Job Application Alerts:
DIGEST_RECIPIENT_EMAIL=your_email@gmail.com

# Live Internet Scan vs Demo Mode:
DEMO_MODE=false # Set to 'false' to search real live company job boards!
```

*Get a free Hugging Face token at **huggingface.co/settings/tokens** (no credit card required).*

Step 5: Run Discovery & Review Application Drafts

- Click **'Run Agent Discovery'** in the sidebar to execute the 13-stage LangGraph workflow.
- The agent scores all discovered opportunities (0-100%) against your skills, preferred cities, and graduation year.
- Under **Application Review**: Inspect drafted cover letters and Q&A; answers. Click **Approve**, **Edit**, or **Reject**.
- Click **'Open Original Job URL'** to verify and submit directly on the company's verified ATS.

Supported Discovery Channels & Career Sources

Platform	Method	Status & Access
Greenhouse	Public Boards API	**Live** (Public endpoint, no auth needed)
Lever	Postings REST API	**Live** (Public endpoint, no auth needed)
Arbeitnow	Job Board API	**Live** (Remote & tech listings)
LinkedIn / Naukri	Direct URL & CSV Importer	**Ready** (Paste vacancy link or upload CSV)
Custom Career Pages	Universal Ingestor	**Live** (Paste any employer URL)

Frequently Asked Questions & Troubleshooting

'python' is not recognized in terminal?	Re-run the Python installer from python.org, click 'Modify', and check *'Add Python to environment variables (PATH)'*.
How do I switch to live jobs instead of demo data?	In .env, set DEMO_MODE=false. Or go to the **Integrations** tab in the dashboard and toggle Demo Mode off.
Are paid API keys required?	No! JobPilot is 100% free to use. Hugging Face free tokens work out of the box, and if you leave it blank, offline rule-based generation works seamlessly.
Is my resume and private data safe?	Yes! Everything runs locally on your PC. Your resume, database, and logs remain strictly inside your local data/jobpilot.db file.
Can the agent run automatically every morning?	Yes! Open **Automation Settings** → Set time (e.g. 09:00 AM) → Click *'Activate Local Daily Automation'*.

Deterministic Multi-Factor Scoring Architecture (0–100%):
- **40% Skill Overlap:** Semantic keyword and technical skill match against your uploaded resume.
- **25% Role Relevance:** Title alignment with your selected target roles.
- **20% Hard Eligibility:** Strict experience limit and graduation batch verification.
- **10% Location Match:** Evaluates against your selected preferred cities or remote preference.
- **5% Posting Freshness:** Recency decay favoring recently published vacancies.

Star the Project & Connect!

If this agent helps your job hunt, please give it a **Star on GitHub**!
- **GitHub Repo:** https://github.com/mathicianrahul/AI-Agent-that-Apply-Job-Automatically-
- **Developer:** Rahul Girase • AIML Engineer & Open Source Developer
- **Contribute:** Feel free to fork, submit issues, or add new platform scrapers!
